

## SO KIDS CAN BE KIDS.

We're committed to creating safer schools that support students as they learn, play and grow. At nora®, we know that choosing the right floor has a significant impact on your K-12 facility. That's why we build the following benefits into every square inch of flooring we produce.

- **Durable, resilient** flooring resists damage caused by high-traffic footfall and rolling equipment.
- **Low-maintenance, coating-free** flooring needs little more than tap water for cleaning, keeping your facility free of chemical allergens that may affect students and staff absenteeism.
- **Reduced life-cycle costs** thanks to simplified maintenance, while exceptionally hard-wearing rubber outlasts the average span of facility renovation cycles.
- **Low VOC emission** floor coverings support healthy indoor air quality and do not contain PVC, plasticizers (phthalates) or halogens (e.g., chlorine).
- **Ergonomic support** reduces strain on staff while simultaneously providing a slip-resistant surface for high-activity student areas such as gyms, hallways and auditoriums.
- **Acoustic control** reduces footfall noise and echoes for a less disruptive learning environment, and is ideal in band rooms.

*“The floor introduced a simpler maintenance regimen that replaced strippers, sealants and finishes with plain water and helps ensure a clean environment. Even though it is twelve years old, it still looks brand new.”*

– William Nye,  
Superintendent,  
Grand Valley Local Schools
