CONTRIBUTION OF NORA® PRODUCTS
TO LEED v4
Introduction

This comprehensive guide contains all the relevant information you need about nora products and the LEED v4 rating system. It was developed to make the process of LEED v4 assessments easier and more effective for you.

At nora® we take sustainability seriously – and not only at corporate level. We see transparency of environmental data as our responsibility to support green building.

We understand that collecting the documentation required for planning, construction and certification is time-consuming. In order to support your efforts, on the following pages we have included details on the sections of the LEED v4 rating system nora products can contribute to. We've also included links and product-specific documentation to accompany your submittals so you have everything you need all in one place.

The information in this brochure relates to the LEED v4 rating system as of 2018.
Building Product Disclosure and Optimization
Environmental Product Declarations (EPD)

Intent
To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts.

Requirements
Use at least 20 different permanently installed products sourced from at least five different manufacturers that disclose environmental product declarations (EPD) that meet one of the disclosure criteria below:

- Product-specific declaration (1/4 point)
- Industry-wide (generic) EPD (1/2 point)
- Product-specific Type III EPD (1 point)

nora® Contribution
nora® has product-specific, Type III, third party certified EPDs for their standard noraplan and norament floor coverings.

Submittal Documentation
nora®'s product-specific, third-party verified EPDs which conform to ISO 14025 and EN 15804, can be downloaded using the following links:

US EPD: www.ul.com
EU EPD: www.ibu-epd.com

Option 1: Environmental Product Declaration (EPD)
## Building Product Disclosure and Optimization

### Sourcing of Raw Materials

<table>
<thead>
<tr>
<th>Option 2: Leadership Extraction Practices</th>
<th>Option 1: Material Ingredient Reporting</th>
</tr>
</thead>
</table>

**Intent**

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products verified to have been extracted or sourced in a responsible manner.

**Requirements**

Use permanently installed building products that meet at least one responsible extraction criterion:

- Extended producer responsibility
- Bio-based materials
- Certified wood products
- Materials reuse
- Recycled content

**nora® Contribution**

Various nora® products contain considerable preconsumer recycled content. Recycled content is the sum of postconsumer recycled content plus one-half the preconsumer recycled content, based on cost.

Please refer to the table on pages 10/11 for the recycled content of specific products.

### Material Ingredients

**Option 1: Material Ingredient Reporting**

Use at least 20 different permanently installed products from at least five different manufacturers that publish the chemical inventory of the product to at least 0.1% (1000 ppm) using one of the USGBC approved programs, including published Health Product Declarations (HPDs) in compliance with the Health Product Declaration Open Standard.

**nora® Contribution**

nora has published HPDs in compliance with the Health Product Declaration Open Standard for standard nora® and norament floor coverings.

### Submittal Documentation

Product-specific recycled content as mentioned in the table on pages 10/11.

## Building Product Disclosure and Optimization

### Material Ingredients

**Option 2: Material Ingredient Optimization**

<table>
<thead>
<tr>
<th>Option 1: Diversion</th>
</tr>
</thead>
</table>

**Intent**

To encourage the use of products and materials for which life-cycle information is available and that have environmentally, economically, and socially preferable life-cycle impacts. To reward project teams for selecting products verified to minimize the use and generation of harmful substances.

**Requirements**

Use products that document their material ingredient optimization using the paths below for at least 25%, by cost, of the total value of permanently installed products in the project.

- **GreenScreen v1.2 Benchmark.** Products must have ingredients to 100 ppm assessed with the GreenScreen List Translator and have no Benchmark 1 hazards. Products that have any ingredients assessed with the GreenScreen List Translator are valued at 100% cost and products that have all ingredients assessed with the GreenScreen List Translator are valued at 150% cost.
- **Cradle to Cradle (C2C) Certified.** End use products are C2C Certified. Products will be valued as follows: C2C v2 Gold: 100% of cost; C2C v2 Platinum: 150% of cost; C2C v3 Silver: 100% of cost; C2C v3 Gold or Platinum: 150% of cost.
- **International Compliance Path – REACH Optimization.** End use products and materials that contain no ingredients listed on the REACH Authorization or Candidate list are valued at 100% of cost.

**nora® Contribution**

Cradle to Cradle (C2C) Certified

nora has Cradle to Cradle (C2C) v3.1 Silver Certification for standard nora® and norament products.

### Submittal Documentation

Documentation with tables on pages 10/11.

**International Compliance Path REACH Optimization**

All nora® products are free of ingredients listed on the REACH Authorization or Candidate list.

**Submittal Documentation**

Documentation with tables on pages 10/11.

Cradle to Cradle (C2C) Certificates are available on the Cradle to Cradle Products Innovation Institute website at https://www.c2ccertified.org/products/registry

### Construction and Demolition Waste Management

**Intent**

To reduce construction and demolition waste disposed of in landfills and incineration facilities by recovering, reusing, and recycling materials.

**Requirements**

Recycle and/or salvage nonhazardous construction and demolition materials. Calculations can be by weight or volume but must be consistent throughout.

- **Path 1: Divert 50% and Three Material Streams.** Divert at least 50% of the total construction and demolition materials; diverted materials must include at least three material streams.
- **Path 2: Divert 75% and Four Material Streams.** Divert at least 75% of the total construction and demolition material; diverted materials must include at least four material streams.

**nora® Contribution**

The nora® Take-Back Program for waste and scrap material from recent installations of new nora® flooring and accessories can contribute to obtaining points under this credit.

**Submittal Documentation**

Details about the nora Take-Back Program can be found at www.nora.com.
Low-Emitting Materials

**Intent**
To reduce concentrations of chemical contaminants that can damage air quality, human health, productivity, and the environment.

**Requirements**
This credit details requirements for volatile organic compound (VOC) emissions into indoor air and the VOC content of materials, as well as the testing methods by which indoor VOC emissions are determined. Different materials must meet different requirements to be considered compliant for this credit.

**Option 1: Product Category Calculations**

**Option 2: Budget Calculation Method**

**nora® Contribution**
nora’s GREENGUARD Gold certifications demonstrate compliance with California Department of Public Health (CDPH) Standard Method v1.1–2010 and the General Emissions Evaluation requirement of this credit. Alternatively, projects outside the U.S. can also use nora products with Blue Angel, Indoor Air Comfort GOLD or EMICODE EC1PLUS certification as they are compliant with the German AgBB Testing and Evaluation Scheme (2010).

In addition, all nora adhesives meet VOC content requirements of SCAQMD as well as local regulations.

**VOC Content Requirements for Wet-Applied Products:**
In addition to meeting the general requirements for VOC emissions (above), on-site wet-applied products must not contain excessive levels of VOCs in order to protect the health of installers and other tradesworkers who are exposed to these products. To demonstrate compliance adhesives and sealants must meet the applicable chemical content requirements of the South Coast Air Quality Management District (SCAQMD) Rule 1168; alternatively, for projects outside the U.S., all adhesives and sealants must either meet the technical requirements of SCAQMD or comply with applicable national VOC control regulations, such as the European Decopaint Directive (2004/42/EC).

**Category Emissions and Content Requirements**

<table>
<thead>
<tr>
<th>Category</th>
<th>Emissions and Content Requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flooring</td>
<td>• General Emissions Evaluation</td>
</tr>
<tr>
<td>Interior adhesives and sealants applied onsite (including flooring adhesive)</td>
<td>• General Emissions Evaluation • VOC content requirements for wet-applied products</td>
</tr>
</tbody>
</table>

**General Emissions Evaluation:**
Building products must be tested and determined compliant in accordance with California Department of Public Health (CDPH) Standard Method v1.1–2010. Alternatively, projects outside the U.S. can use products tested and deemed compliant with the German AgBB Testing and Evaluation Scheme (2010).
