YYC Calgary International Airport

Calgary, Alberta

“nora flooring best suits our needs, based on the durability and ease of maintaining the flooring.”

Calgary Airport Authority

YYC Calgary International Airport, in Calgary, Canada, recently doubled in size, the result of a \$2 billion expansion project. According to the Calgary Airport Authority, “Our goal was to create an environment that provides a sense of comfort for our travelers.” Premium rubber flooring from nora systems, Inc. proved instrumental in achieving that goal. More than 400,000 square feet of norament® grano and noraplan® sentica installed in various portions of the airport terminal and its new Connections Corridor provide important wayfinding for travelers and combine colors and patterns to create visual interest.

At the same time, the floor’s simple maintenance regimen ensures the floors always look clean, while its durable surface stands up to the more than 15 million travelers, along with rolling luggage and carts, that pass through the airport each year. Says the Calgary Airport Authority, “nora flooring best suits our needs, based on the durability and ease of maintaining the flooring.”
