THESE FLOORS BEAR ONE THING
IN PARTICULAR: RESPONSIBILITY.
nora® floor coverings for healthy living
in childcare facilities.

www.nora.com
Making sure children feel great.

Choosing the right floor covering when equipping childcare facilities is an important factor for the children’s well-being. Especially in the first years of life, children come in close contact with the floor when they play, romp or rest. Floor coverings take up the majority of a room surface and are a determining factor for a positive atmosphere, indoor air quality, comfort and economic efficiency. With an average durability of far more than 20 years, nora® floor coverings are an excellent investment in the future. This is just one of the reasons why they have been the choice of flooring for many childcare facilities around the world for decades.

With a sense of responsibility to global market leader: nora systems GmbH.

When it comes to rubber floor coverings and floor covering systems, we are the market leader. Around the world, architects, builders, processors and consumers put their trust in us when it comes to creating healthy and aesthetically pleasing interior design. All nora® floor coverings are made at our headquarters in Weinheim, Germany and offer valuable premium quality ‘Made in Germany’. Our systems are available globally from our own 16 sales organisations and in more than 80 countries.

We consistently follow our vision of creating unique and sustainable products for the benefit of our customers. To ensure this, we put all our innovation spirit into our product development. Furthermore, we accompany our customers in the planning and realisation process as well as in maintaining the value of the floor coverings.

For us, innovation also includes constant learning - from our customers, the markets and the ecological development. We take on the responsibility of having a holistic and future-oriented approach and act accordingly. Maybe this is one of the reasons why we have been enjoying our customers’ trust for more than 70 years.
gesunde Innenraumluft & Kostenreduzierung
Even the Blaue Engel is thrilled about the great tolerance of our products.
nora® floor coverings promote healthy indoor air.

Today, buildings are increasingly built in a closed manner—almost airtight—to save energy. This automatically minimises the air exchange and the use of low-emission materials is an imperative necessity. nora® rubber floor coverings are completely free of PVC, plasticisers (e.g. phthalates) and halogens (e.g. chlorine). This has been recognised with the award of the eco-label “Der Blaue Engel ... as low in emissions” as well as other international quality seals. nora® floor coverings generally do not require any coating. This eliminates the regular, environmentally-damaging renewal of the coating, which is standard for other elastic floor coverings.

Emissions can also be the result of installation materials, for example, among other things, adhesives under the floor covering. We offer you a certified overall system including qualified installation companies: nora system blue®. This unique composite system has undergone independent testing, and its tolerability and reliability has been verified with TÜV certificates. For sustainable environmental and health safety.
Even little people have great demands when it comes to design and comfort. nora® floor coverings are well suited for use in a child’s environment.

With almost 300 colour shades and a multitude of designs, nora® floor coverings offer countless imaginative design possibilities for a genuine feel-good atmosphere. Pictures, patterns, games or guide systems can be supplied as inlays in the floors. Matching accessories complete the visual overall impression and ensure a harmonious interior design.

The tactile properties are also impressive: The floor coverings are cozy and warm for little feet - even for bare feet - and have a pleasant feel when touched with hands. Little ones can safely romp and play around - the floor coverings have anti-slip protection and are highly elastic. The elasticity of the floor covering is especially important to childcare staff, as it is gentle on the body in times of long standing and lots of walking.

nora® floor coverings absorb noise, promoting a quiet and pleasant atmosphere. Some coverings, for example the acoustic coverings, have an additional elastic insulation layer, which ensures increased footstep sound insulation and ensures even better walking comfort. Perfect for rooms where little ones like to do gymnastics and romp around.

In this way, comfort zones and learning worlds can be created, in which children can move safely and in which they love to spend time.
You can rely on children being temperamental. And also on the efficiency of our coverings.
nora® floor coverings permanently save you money.

nora® floor coverings consist through and through of rubber, a very powerful raw material. The surface of our rubber floorings is post-cured at the factory with nora cleanguard® which ensures a dense and closed surface. This makes the floor covering particularly resistant to stains and damages. The floor covering looks like new for many years to come. nora® rubber floor coverings do not need additional coatings, which would have to be renewed regularly at great cost. You get a floor covering that will keep its high quality look throughout its life cycle and which can be maintained economically.
