

APPLICATIONS-ENGINEERING INFORMATION SHEET

for Dismozon pur (Bode Chemie, Hamburg) and Apesin AP 100 (Tana-Chemie, Mainz)

Revision: 02/2018

Product:

Dismozon pur (Bode Chemie, Hamburg) and Apesin AP 100 (Tana-Chemie, Mainz)

Short description:

Oxygen-active surface disinfectant based on magnesium monoperoxophthalate.

Field of application:

This cleaning agent is suited for the removal of stains caused by Dopamin, fruit juice, red wine, coffee, tea and cigarettes.

Properties:

| | |
|---|-----------------------------|
| Form: | Granulate |
| Colour: | White |
| Odour: | Characteristic |
| Melting point/Melting range: | not determined |
| Boiling point/Boiling range: | not determined |
| Flash point: | Not applicable |
| Self-igniting: | product is not selfigniting |
| Danger of explosion: | product is not explosive |
| Solubility in / Miscibility with water: | soluble |
| pH-value (5,0 g/l) at 20°C: | ca. 5-6 |

Shelf life: see expiry date fixed by the manufacturer

Application:

1. Remove any other impurities from the stains to be treated, using a customary wax-free cleaning agent.
2. Then, scatter one of the products listed by DGHM on the stain, and spray some water on it by using an atomizer, for example. The time of exposure may reach 30 minutes, depending on how old the stain is.
3. The cleaning solution should then be removed without leaving any residues, before wiping the floor carefully with water.
4. Should the flooring be submitted to initial polishing operations using an emulsion/dispersion, following the removal of the stains by means of Dismozon or Apesin AP 100, the surfaces to be treated will have to be cleaned using a phosphorus-acid sanitary cleaning agent. This is required to remove all the residues left behind by the above-mentioned agents to make it possible for the protecting film to adhere properly. The sanitary cleaning agent should be applied undiluted. The sanitary cleaning agent should be removed after a time of exposure of about 10 minutes before rinsing again thoroughly with water.
5. The emulsion/dispersion can then be applied to the flooring when dry.

Safety instruction:

Before using the surface disinfectant, please read and comply with the information contained in the present safety data sheet.

Risks of serious damage to the eyes. Irritates the eyes, respiratory organs and the skin.

Avoid any contact with the eyes and the skin. Wear rubber gloves and safety glasses. Wash thoroughly with water after contact with the eyes and the skin.

The instructions given in this information sheet must be meticulously complied with. They reflect the current status of our knowledge and experience, but cannot be construed as entailing any liability on our part.
