

1.	<b>Initial cleaning after installation</b>	 <p>Machine wet scrubbing using an active or microfibre pad or a red pad* (see cleaning and polishing agents table).</p>	 <p>After vacuuming off the loose dirt with a wet vacuum cleaner scrub again with clean water and vacuum or scrub and dry.</p>
2.	<b>Initial polishing treatment/ polishing treatment</b>	 <p>After the initial or intensive cleaning, evenly apply a suitable wash polish (see cleaning and polishing agents table) by wet mopping.</p>	 <p>The dried polishing agent film can be polished** using a suitable polishing pad*.</p>
3.	<b>Routine cleaning/ polishing (machine)</b>	 <p>Optimal cleaning results are achieved with a scrubber dryer using an active or microfibre pad or a red pad* with a suitable wash polish (see cleaning and polishing agents table).</p>	 <p>To maintain a uniform and appealing look of the floor covering, we recommend polishing** with a suitable polishing pad*.</p>
	<b>Routine cleaning/ polishing (manual)</b>	 <p>Remove dust by using suitable microfibre wipes, mop fleece or dust-binding cloths.</p>	 <p>Adhesive water-soluble or emulsifiable contaminations are removed by wet mopping (see cleaning and polishing agents table).</p>
4.	<b>Intermediate cleaning</b>	 <p>To remove walking or heel marks and to maintain a uniform and optically appealing look of the floor covering, we recommend cleaning as needed with a suitable wash polish (see cleaning and polishing agents table) using a suitable polishing pad*.</p>	
5.	<b>Intensive cleaning</b>	 <p>Machine wet scrubbing using an active or microfibre pad or a red pad* and suitable cleaning agent (see cleaning and polishing agents table). As water-soluble polishing agents are recommended for the polishing treatment, basic cleaning agents are usually not required.</p>	 <p>After vacuuming the loose dirt with a wet vacuum cleaner, the polishing treatment is performed in the same way as the initial polishing treatment.</p>

**General notes:**

- As coatings require regular and cost-intensive basic cleaning and renewal, nora systems GmbH recommends that noraplan® rubber floor coverings, which are leakproof and have sealed surfaces, not be coated.
- Please observe the instruction in the product and safety data sheets of the cleaning & polishing agents used.
- This cleaning recommendation applies to firmly bonded floor coverings.
- In the health care sector and in laboratory areas, the initial polishing treatment by wiping is preferred, due to the media used, such as surface-, hand- and instrument disinfectants and solvents.

\* Suitable pads: 3 M etc.

\*\* Use single-disc polishing machine with speeds of between 1000 – 1500 rpm.

## Cleaning and polishing agents

The cleaning and polishing agents listed in the table are **recommendations by cleaning agent manufacturers in the German market**. Depending on the premises, it may be useful to use **products and processes that differ from the standard, but according to the cleaning agent manufacturer's recommendation**. Please observe **the product-specific manufacturer's instructions!** Of course, you can also use suitable cleaning agents from non-listed cleaning agent manufacturers according to their recommendations. nora recommends to observe the following list, as from our experience, best results are achieved with these cleaning agents.
